41.5 (July)	4 May 2012
41.6 (September)	5 July 2012
41.7 (October)	16 August 2012
41.8 (December)	27 September 2012

The Journal

Now celebrating 41 years of research excellence, **Dentomaxillofacial Radiology (DMFR)** is the highly-regarded, flagship journal of the International Association of Dentomaxillofacial Radiology (IADMFR) and is dedicated to the closely related fields of oral radiology and head and neck imaging.

DMFR keeps dentists, radiologists and other clinicians abreast of the most important research and developments in oral and maxillofacial radiology.

With the speciality of orthodontics rapidly adopting new imaging modalities, particularly cone-beam computed tomography, for the diagnosis and treatment planning of orthodontic patients, **DMFR** regularly features papers on this topic and others that will appeal to orthodontists who want to understand and use the latest technology for their patients.

DMFR publishes original research papers, review articles, systematic reviews, case reports, short communications and technical reports, covering both the clinical and experimental aspects of oral and maxillofacial imaging.

Circulation

DMFR is published eight times per year in January, February, March, May, July, September, October and December.

Total paid circulation - 1,000 worldwide:

- IADMFR members (over 600 named dentists and oral maxillofacial radiology specialists!)
- University libraries
- Dental libraries
- Research facilities
- Hospitals
